

# Sharps Passing Tray

## Secure and safe transfer of Sharps

The innovative Sharps Passing Tray reduces the potential risk of needlestick injury to clinicians.

Globally more than 2 million<sup>1</sup> occupational exposures to sharp injuries occur among 35 million healthcare workers each year. Specifically, 18,000<sup>2</sup> in Australia, 385,000<sup>3</sup> in the US, and 1,000,000<sup>4</sup> in the EU.

The versatile design improves safety with ergonomically designed textured grip on sides, top and base while a channel at each end secures variable sharps component sizes up to a 30mL Syringe facilitating safer transfer.

The low profile design maximises limited storage space and reduces biohazard waste.

# Sharps Passing Tray

- Healthcare workers have a duty to use a hands free or neutral zone, i.e. an agreed upon location where sharps are placed for transfer so no two individuals are touching the sharp simultaneously<sup>1</sup>.
- ITL's Sharps Passing Tray patented versatile design enables a safer needle and sharps transfer between clinicians by shielding the sharp section of the instrument while leaving the handle free to access.
- Sharps Passing Tray accommodates all commonly used sharps used in the operating room making healthcare workplaces safer
- Clinically disposable and made from lightweight, durable medical grade polypropylene suitable for recycling

Small

Large

## Protects

- Three different pick-up zones enable the careful placement and removal of components
- An innovative channel at each end secures the syringe flange for safe transfer

## Ergonomic & Stable

- Wide base provides optimal stability on uneven surfaces
- Tactile grip surfaces on both sides, top and base helps to negate any handling slippage

## Maximise Efficiencies

- Low profile optimizes storage
- Available in two sizes and can be easily added to customised procedure packs to reduce overall packaging
