

SampLok[®] Sampling Kit

When size and volume matter

SampLok[®] Sampling Kit provides a simpler, safer and more efficient way to collect and transfer platelet samples for bacterial testing.

It reduces the number of procedure steps in this process, streamlining and simplifying the collection and transfer of biological samples.

Available in 10mL, 16mL and 35mL volumes, there's a kit for every collection type and process.

SampLok[®] Sampling Kit can also be used with a variety of different sized culture bottles and vacuum tubes.

More than 385,000 US healthcare workers¹ sustain needlestick injuries each year.

The standard for best practice in bacterial testing.

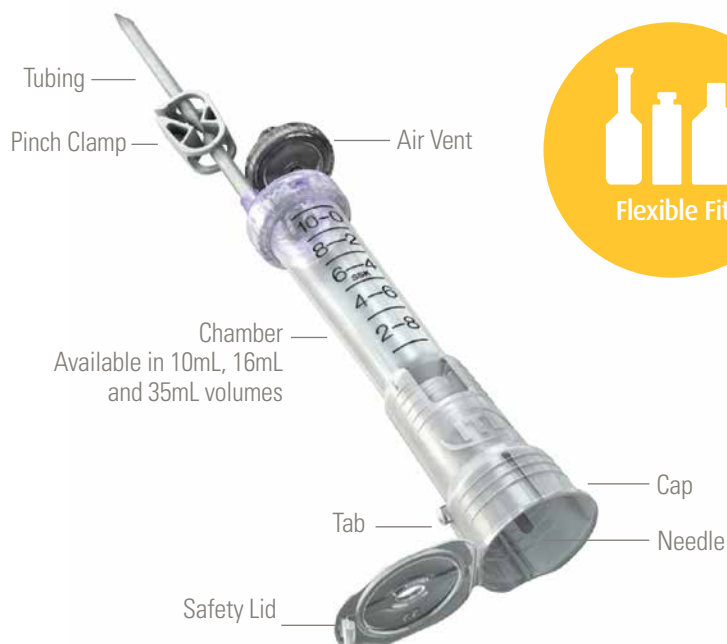

Available in:

- ✓ 10mL
- ✓ 16mL
- ✓ 35mL

Make platelet screening sampling simpler, safer and more efficient

SampLok® Sampling Kit:

- Simple and efficient design
- Gravity-fill sampling function
- Three volume options – 10mL, 16mL and 35mL
- Integrated safety lid provides needlestick protection
- Flexible fit - compatible with a variety of culture bottles and vacuum tubes
- Closed system sampling
- Stay open lid feature
- Minimises waste of biological samples
- Easy-to-store, compact design
